

Floor tile quantities — 5 Ellalong Road, Cremorne

Job TKF-000 (PARTIAL demo) · measured against drawings Rev L, 01/09/25 · 5 rooms.

ORDER THIS

Floor tiles 36.4 m²
Tile skirting 7.3 m

+ ~3.1 m² powder room floor — pending Q1

Straight lay, 10% extra for cuts and breakage —
trade standard, not your settings yet. Tell us how
you actually work and we'll re-cut every number.
Walls are waiting on the internal elevations — Q3.

NOT INCLUDED

ALL WALL TILE — see below. Not measured, not
guessed. That includes the laundry splashback,
feature zones and every niche.
Waterproofing membrane and upturns
Screed, falls and floor wastes
Substrate prep, sheeting and levelling
Labour, rates and pricing of any kind
Powder room floor — unresolved, see Q1

We measure. What you charge is your business.

Walls

Walls: not measured — this set has no internal wet-area elevations. Send the internal elevations and we'll add every wall.

Wall tile heights only exist on the internal wall drawings of each room, and this set doesn't carry them. We won't price a wall off a guess. The moment your designer sends the internal elevation / joinery sheets, every wall goes into this same job — no new job, no extra back-and-forth.

⚠ Check these 3 things before you quote

[] 1. Can you send the powder room floor plan? Sheet 3.01 isn't in the set — we worked the floor back off the wall drawings as 1730 × 1610. **Worth ~3.1 m² of floor tile.**

[] 2. Do you tile under the wall-hung vanities, and behind the baths? We tiled under all three vanities (300 clear) and not behind the baths. **3.4 m² under the vanities, 4.3 m² on the bath platforms.**

[] 3. Ask your designer for the internal elevations of each wet area. That's the one thing standing between this document and your wall quantities.

Two smaller things we had to fill in are on the answer form, page 3.

Room by room

MAIN BATHROOM ✓

- Floor tiles — 9.0 m²

West wall steps out 200 partway down — measured in two strips, not as one rectangle.

GUEST ENSUITE ✓

- Floor tiles — 9.3 m² · tiles run under the vanity

True rectangle, checked four ways.

LAUNDRY ✓

- Floor tiles — 6.3 m² · after taking off the cupboards

The 450 splashback over the bench is wall tile — waiting on the elevations with the rest.

MASTER ENSUITE ✓

- Floor tiles — 11.8 m² · ready to order

Cross-shaped, not a rectangle. Measured as one rectangle it reads 19.9 m² — 9 m² over.

POWDER ROOM △

- Floor tiles — about 3.1 m² △ · not ready. No floor plan in the set — Q1
- Tile skirting — 7.3 m ✓ · 300 high, off the wall drawings in this set

SITE NOTES

Sheet 12.01 is 1:25; every other sheet is 1:20.
We never scale - anyone who does will be 25%
out on the biggest room in the job.

Sheet 4.02 has a hand-drawn red arrow pointing
at the laundry splashback. Not CAD - someone
marked it up. Splashback is wall scope - flag it
when the elevations come through.

All sheets say "frame to frame", so finished
tile faces sit ~30-40 mm inside the printed
lines. Everything here is marginally generous.

FLAGGED FOR YOU

WATERPROOFING - where the wet zones are
Locations only. Membrane extent and upturns are
the waterproofer's scope and are NOT in these
numbers.

Master ensuite	enclosed shower alcove, the 400 x 1200 shower seat, bath platform
Guest ensuite	walk-in shower
Main bathroom	shower zone in the SE corner, plus the bath platform
Laundry	floor waste, no shower
Powder room	no shower or bath

WALL ITEMS SEEN, NOT MEASURED

Feature tile call-ups, niches and mitred-corner notes appear on the sheets we do have. All wall scope - they'll be measured with the walls when the internal elevations arrive.

=====

Assumptions — the answer form

Two things the drawings didn't tell us. Scribble your answers in the last column, photo it, send it back — **and we re-issue free.**

What we assumed	We used	Worth	Your answer
Powder room floor size — no floor plan in the set	1730 × 1610	~3.1 m ²	___
Main bathroom west wall step — chain says 2260, drawing looks like 2110	2260	0.03 m ²	___

Two more that aren't assumptions but are scope — tick whichever matches how you work:

	Yes	No
Tile under the wall-hung vanities? <i>(we said yes — 3.4 m²)</i>	☐	☐
Tile behind the bath platforms? <i>(we said no — 4.3 m²)</i>	☐	☐

=====

THE PROOF — for checking, not reading.

=====

Everything past this line is the working. You don't need any of it to use the numbers on page 1. It's here so you can check anything you want to, and so you can hold us to it.

1. The measured areas, and how they became the order

These are the measured areas — what the plans say. They are the same for every tiler who ever gets this set. Nothing in your profile, and nothing about how you lay tile, can move them by a millimetre.

	Floor	Skirting
Powder room	2.785	6.680 m
Laundry	5.684	—
Main bathroom	8.205	—
Guest ensuite	8.440	—
Master ensuite	10.693	—
Ready to order	33.022	6.680 m

Italics = not ready to order, waiting on a question.

Then your settings turn those into an order

1. Measured		the plans' truth
2. + 10% extra for cuts	straight lay	trade standard - not confirmed by you yet
3. + 0% batch buffer	not set	account question 5
4. + 0% lead-time buffer	not set	account question 5
5. Rounded to 0.1 m ²	per room, then the	rooms added up
6. Boxes	not worked out - we don't know your tile yet	

	Measured	Order
Floor tiles	33.022 m ²	36.4 m²
Tile skirting	6.680 m	7.3 m

The order column runs a touch above a straight 10% because we round each room to 0.1 first and then add the rooms up — so the room figures on page 2 visibly add to the total.

2. Room by room working

Powder room — wall drawings 01–03

No floor plan in the set, so the floor is worked backwards off the four wall runs.

Wall drawing 02 run	1730	checked: 100 + 840 + 790 = 1730	on wall drawing 04
Wall drawing 01 run	1605		
Wall drawing 03 run	1615	10 mm off drawing 01 — fine	
Floor	1730 × 1610	=	2.785 m ²
Skirting	1730 + 1610 + 1730 + 1610	=	6.680 m

The 300 at the bottom of the height chain is the tile skirting. The skirting run is the full way round — take your door width off it once sheet 3.01 turns up.

Laundry — floor plan 4.01

Room is a true rectangle. Checked both ways:			
across	700 + 1150 + 450	= 2300	drawing says 2300
down	715 + 2525	= 3240	drawing says 3240
Floor, whole room	2300 × 3240	=	7.452 m ²
Cupboards taken off	700 × 2525	=	-1.768 m ²
Floor to tile			5.684 m ²

The cupboards sit on the floor (135 kickboard), so tiles stop at them.

Main bathroom — floor plan 7.01

The west wall steps out 200 partway down, so we measured the floor in two strips.

North strip	2570 wide	(550 vanity + 1000 window + 1020 bath = 2570)	
South strip	2770 wide	(685 + 820 + 245 + 20 + 1000 = 2770)	
Step is 2260 down from the north wall. Whole room is 3895 deep.			
Strip A	2570 × 3895	=	10.010 m ²
Strip B	200 × 1635	=	0.327 m ²
Floor, whole room			10.337 m ²
Bath platform taken off	1020 × 2090	=	-2.132 m ²
Floor to tile			8.205 m ²

The vanity is wall hung with 300 clear underneath, so tiles run straight under it — nothing taken off for it.

Guest ensuite — floor plan 10.05

Rectangle, checked four ways:			
across, top	1920 + 960 + 20 + 1100	=	4000
across, bottom	1290 + 820 + 1890	=	4000
down, left	600 + 1060 + 450	=	2110
down, right	1200 + 910	=	2110
Floor	4000 × 2110	=	8.440 m ²

Vanity is wall hung, 300 clear — tiles run under it.

Master ensuite — floor plan 12.01

Cross-shaped room. We measured it in four strips.

Checked all four ways round:			
across, top	1835 + 495 + 2305 + 585	= 5220	drawing says 5215
across, bottom	1835 + 3380	= 5215	drawing says 5215
down, left	960 + 550 + 250 + 1270 + 815	= 3845	drawing says 3840
down, right	960 + 860 + 2000	= 3820	drawing says 3820
Bath alcove	2305 × 1510	=	3.481 m ²
Middle strip	2800 × 310	=	0.868 m ²
Main floor	3380 × 2020	=	6.828 m ²
Shower alcove	1835 × 1204	=	2.209 m ²
Floor, whole room			13.385 m ²
Bath platform taken off	2305 × 960	=	-2.213 m ²
Shower seat taken off	400 × 1200	=	-0.480 m ²
Floor to tile			10.693 m ²

Measured as one big rectangle (5215 × 3820) this room comes out at 19.9 m². It isn't a rectangle. The difference is 9.2 m² of tile you'd order and never lay.

3. What we double-checked

- ✓ **Every chain adds up to its printed total.** Every sub-chain above was summed and checked against the stated overall — worst gap 10 mm (powder room wall drawings), well inside tolerance.
- ✓ **Opposite sides agree.** Laundry, guest ensuite and master ensuite check both ways round; the main bathroom's step is real and appears on both chains.
- ✓ **Sanity ranges.** Every floor sits inside the 2–25 m² band a real wet room lands in.
- ⚠ **Wall runs vs floor perimeter** — our strongest check needs the internal elevations, which this set doesn't have. It runs the day they arrive.

4. What we had to fill in

Both fill-ins are on the answer form on page 3. One extra that doesn't change a floor number: **sheet 4.02's hand-drawn red arrow** at the laundry splashback — wall scope, but if it means the splashback is changing, tell us with the elevations.

5. The drawings we read

19 sheets, Harper Lane Design project 24107, Rev L, 01/09/25: four dimensioned floor plans (laundry 4.01, main bath 7.01, guest ensuite 10.05, master ensuite 12.01 — 12.01 at 1:25, the rest 1:20), the powder room wall drawings, a schedule, and 3D views (context only, never a source of dimensions). **No internal wet-area elevations are in the set** — that is the gap named on page 1.

6. Before you quote

```
[ ] The sheet numbers and dates above match the drawings you were given
[ ] You've answered the questions at the top
[ ] Anything marked ⚠ is sorted, or left out of your quote
[ ] You agree with what we took off and what we left in (under the vanity? behind the bath?)
[ ] Tile size and lay direction confirmed — that's what drives the extra for cuts
[ ] You're happy with 10% extra for cuts, or you've told us to change it
[ ] WALL TILE IS NOT IN THESE NUMBERS — internal elevations pending
[ ] Waterproofing, screed and floor prep are NOT in these numbers
[ ] You've re-checked at least two numbers by hand against the plan
```
