

Tile quantities — project 14-66, Torquay

Job **QA-DBY** · measured against drawings **Rev A (floor plan & A17)**, **Rev — elsewhere, 15/12/2015** · 3 wet rooms.

ORDER THIS

Floor tiles	31.0 m ²
Wall tiles	33.7 m ²
Mosaic splashback	0.6 m ²
Tile skirting	4.7 m

+ ~1.6 m² laundry splashback — pending Q1
+ ~4 m laundry skirting — pending Q1
+ niches, both showers — pending Q2

Straight lay, 10% extra for cuts and breakage —
trade standard, not your settings yet. Tell us how
you actually work and we'll re-cut every number.

NOT INCLUDED

MAIN-AREA FLOOR TILES — entry, passage, kitchen,
dining, living AND bed 3 are all marked TILES on
the plan. You asked wet areas only. That's most
of the house's tiling — say the word. See Q4.
Kitchen splashback — it's GLASS on these drawings,
not tile.
Waterproofing membrane and upturns
Screed, falls and floor wastes
Substrate prep, sheeting and levelling
Labour, rates and pricing of any kind
Laundry splashback + skirting — unresolved, Q1
Shower niches — unresolved, Q2

We measure. What you charge is your business.

⚠ Check these 4 things before you quote

[] **1. The laundry sheet (A19) has no length dimensions on it.** The bench run and skirting runs aren't dimensioned anywhere, so the laundry splashback (600 high over the bench) and skirting are our read of the drawing, not a measurement. **Worth ~1.6 m² of splashback and ~4 m of skirting.** Ask the builder for the joinery setout, or we'll measure on site.

[] **2. How big and how deep are the two shower niches?** The bathroom niche is printed 600 wide × 300 high but no depth; the ensuite niche has no size at all. **Worth ~0.5–1 m² of wall tile.**

[] **3. Are you building off Rev A?** Revision A changed things that move these numbers: W1 was resized, W2 and W2A are now plastered over inside the ensuite (so there are no window holes in the tiled walls), and W11 moved. If you're holding an earlier print, the ensuite wall figures are wrong.

[] **4. Do you want the main floors quoted?** Entry, passage, kitchen, dining, living and bed 3 are all tiled on this plan — several times the wet-area floor quantity. **Not in the box above.** Same drawings, same day, just say so. (And check bed 3 really is tile — a tiled bedroom is unusual.)

Six smaller things we had to fill in are on the answer form, page 4.

Room by room

ENSUITE

- **Floor tiles — 12.3 m² ✓** · tiles run under the freestanding bath and wall-hung vanity
- **Wall tiles — 16.5 m² ** · full height on the shower/WC side, 900-high band elsewhere
- **Mosaic splashback — 0.6 m² ✓** · 150 high above the vanity bench, with both end returns

The shower/WC end of the room is tiled floor-to-ceiling ("full height tiles to this wall also" — the drawing's words). The rest runs as a 900 band. The two windows on the tiled walls don't exist inside any more — Rev A plastered them over — and the third sits above the band. The niche is not in the wall figure — Q2.

BATHROOM

- **Floor tiles — 9.5 m² ✓**
- **Wall tiles — 17.2 m² ✓** · whole vanity wall floor-to-ceiling, shower wall, door strip
- **Tile skirting — 4.7 m ✓** · 90 high, the plain wall opposite the vanity

No bath in the bathroom — it's a shower room; the only tub in the house is in the ensuite. The window sits in the untiled part of the shower wall, so nothing comes off. The niche (600 × 300, no depth printed) is not in the wall figure — Q2.

LAUNDRY

- **Floor tiles — 9.2 m² ✓** · the full 1,800-wide strip, north wall to the passage
- **Splashback — about 1.6 m² ** · **not ready.** 600 high over the bench — run not dimensioned, Q1
- **Tile skirting — about 4 m ** · **not ready.** Called up on the drawings, runs not dimensioned, Q1

A walk-through laundry. The floor figure is the whole tiled strip including the walk-through; the kitchen's tiles continue past it and are not counted (Q4). We tiled under the washer, dryer and bench — tell us if your scope stops at the kickboard.

SITE NOTES

Four scales in one set - 1:100 plan, 1:50 details, 1:200 site, 1:1 details. We never scale; anyone who does will be wrong somewhere.

Rev A is marked with clouds on the floor plan and the ensuite sheet: W1 resized, W2 + W2A plastered over internally, W11 moved, and the ensuite towel rails relocated. Price off Rev A.

The bed 2 wall reads 3,610 on the top chain and 3,620 on the bottom - not an error, different reference faces (100 vs 90). Totals agree.

Dimensions are written-dims-only per the notes page ("DO NOT SCALE... USE WRITTEN DIMENSIONS ONLY"). No frame-to-frame note - the convention isn't stated, so verify one room on site before setting out.

FFL 100.4 through the house, 100.25 garage.

=====

FLAGGED FOR YOU

=====

TWO SHOWER SCREENS - semi-frameless, 2,100 high, one per shower. Glazier's scope, easy to miss.

WATERPROOFING - AS 3740 per the notes: 1,800 min above floor to shower enclosures, 300 above the laundry trough. Locations: ensuite shower (SE corner), bathroom shower (SE corner), laundry trough wall. NOT in these numbers.

TILE BANDS DIFFER ROOM TO ROOM - deliberate on the drawings: ensuite is a 900 band with a full-height shower end; the bathroom vanity wall is floor-to-ceiling. Don't quote one room off the other.

MIRRORS MOUNT ON TILE in the bathroom (tile runs full height behind the frameless mirror). Sequence matters for the glazier.

BED 3 FLOOR IS MARKED "TILES" - unusual for a bedroom, and bed 2 is carpet. Confirm before anyone orders flooring. Not in our numbers (Q4).

=====

Assumptions — the answer form

Six things the drawings didn't fully say. What we used, what it's worth — scribble your answers, photo it, send it back, **we re-issue free**.

What we assumed	We used	Worth	Your answer
Ensuite full-height tile extent on the WC/shower wall	the full 2,350 zone (per the "full height tiles" note + drawn grid)	~4.2 m ²	___
Laundry bench run (sheet A19 has no length dims)	2,400	~1.6 m ²	___
Laundry skirting runs	~4 m	~4 m	___
Niche depths (bathroom 600×300×?, ensuite unsized)	excluded, pending	~0.5–1 m ²	___
Ensuite splashback end returns	610 each end	0.2 m ²	___
Laundry floor boundary at the kitchen	the 1,800 strip, wall to wall	±0.5 m ²	___

Scope — tick whichever matches how you work:

	Yes	No
Tile under the freestanding bath? <i>(we said yes — it's a back-to-wall cube on a tiled floor)</i>	☐	☐
Tile under the laundry bench and machines? <i>(we said yes — ~0.7 m²)</i>	☐	☐

=====

THE PROOF — for checking, not reading.

=====

Everything past this line is the working. You don't need any of it to use the numbers on page 1. It's here so you can check anything you want to, and so you can hold us to it.

1. The measured areas, and how they became the order

These are the measured areas — what the plans say. They are the same for every tiler who ever gets this set. Nothing in your settings can move them by a millimetre.

	Floor	Wall	Splashback	Skirting
Ensuite	11.204	14.973	0.578	—
Bathroom	8.605	15.633	—	4.260 m
Laundry	8.370	—	1.440	~4 m
Ready to order	28.179	30.606	0.578	4.260 m

Italics = not ready to order, waiting on a question.

Then your settings turn those into an order

1. Measured		the plans' truth
2. + 10% extra for cuts	straight lay	trade standard — not confirmed by you yet
3. + 0% batch buffer	not set	account question 5
4. + 0% lead-time buffer	not set	account question 5
5. Rounded to 0.1 m ²	per room, then the rooms added up	
6. Boxes	not worked out — we don't know your tile yet	

	Measured	Order
Floor tiles	28.179 m ²	31.0 m²
Wall tiles	30.606 m ²	33.7 m²
Mosaic splashback	0.578 m ²	0.6 m²
Tile skirting	4.260 m	4.7 m

Order figures are each room rounded to 0.1 first, then added — so the room lines on page 2 visibly add to the totals.

2. Room by room working

Ensuite — sheet A17 (plan detail + IE 01–04), Rev A

Room, checked both ways:			
across	1,720 + 910	= 2,630	chain header says 2,630
across	920 + 800 + 910 (south features)	= 2,630	agrees
down	610 + 1,210 + 90 + 2,350	= 4,260	chain header says 4,260
down	1,820 + 90 + 2,350 (west side)	= 4,260	agrees
Floor	2.630 × 4.260	= 11.204 m ²	

Nothing taken off: the bath is a freestanding back-to-wall cube (Caroma Cube 1800) sitting on the tiled floor,

the vanity is wall-hung, the shower is an open walk-in with a 50 mm recess, and the WC is a pan.

Walls — ceiling 2,700, printed on every elevation:

WC/shower wall (east), full height	2.350 × 2.700	= 6.345 m ²
Shower end of south wall, full height	0.910 × 2.700	= 2.457 m ²
South wall band	1.720 × 0.900	= 1.548 m ²
West wall band	4.260 × 0.900	= 3.834 m ²
Under the vanity (north, wall-hung)	2.630 × 0.300	= 0.789 m ²
Wall tile		14.973 m ²
Mosaic splashback	(2.630 + 0.610 + 0.610) × 0.150	= 0.578 m ²

Heights all come off printed chains: 900 + 150 + 600 + 1,050 = 2,700 on the west wall (band 900, splashback 150, window 600, head zone 1,050); 300 + 1,350 + 150 + 900 = 2,700 on the vanity wall; 600 + 2,100 = 2,700 at the screen. No window holes: W2 and W2A are plastered over internally (Rev A), W13's sill is at 1,750 and W1's at 1,050 — both above their walls' 900 tile band.

Bathroom — sheet A18 (plan detail + IE 09–12)

Room, checked both ways:			
across	1,400 + 620	= 2,020	chain header says 2,020
across	1,100 + 10 + 910 (south)	= 2,020	agrees
down	1,810 + 930 + 10 + 1,510	= 4,260	matches the wing depth
Floor	2.020 × 4.260	= 8.605 m ²	

No tub in this room — shower, wall-hung vanity, WC only. Nothing taken off.

Vanity/WC/shower wall (east), floor to ceiling	4.260 × 2.700	= 11.502 m ²
Shower end of south wall, full height	0.910 × 2.700	= 2.457 m ²
Door-side strip (north), full height	0.620 × 2.700	= 1.674 m ²
Wall tile		15.633 m ²
Tile skirting (west wall, 90 high)	4.260 m	

The frameless mirror mounts on the tile — the tile runs behind it. W10 sits in the untiled 1,100 zone of the south wall (sill 900): no deduction. The niche (600 × 300, depth unprinted) is excluded pending Q2.

Laundry — sheet A19 (plan detail + IE 17–19)

Strip width, checked:	610 + 1,190	= 1,800	chain header says 1,800
Strip depth:	north band	= 4,650	(4,650 printed both sides of the A19 plan detail)
Floor	1.800 × 4.650	= 8.370 m ²	

That is the whole tiled strip between its two walls, from the north wall to the passage, walk-through included. The kitchen's floor tiles continue beyond the strip's east wall and are not counted (Q4). We tiled under the bench and machines — answer-form tick if not.

Splashback	0.600 high × bench run (NOT DIMENSIONED)	— provisional 2,400	
	0.600 × 2.400	= 1.440 m ²	△ Q1
Skirting	TSK called up on IE 17; runs not dimensioned	— ~4 m	△ Q1

A19 carries vertical chains only (300 + 900 + 600 + 900 = 2,700 — overheads, splashback, bench). There is not one horizontal dimension on the sheet. That is why the laundry's wall items are questions and its floor is not.

3. What we double-checked

Six checks on every job. Here's how this set did.

- ✓ **Every chain adds up to its printed total — 0 mm.** House: $90+2,630+90+2,120+90+3,420+90+2,020+90+3,590+120+5,835 = 20,185$ exactly; the south positions chain hits 20,295 exactly. Rooms: every width and depth chain above closes to 0 mm. Heights: six independent vertical chains all close on 2,700 exactly ($300+1,500+40+560+300 \cdot 450+500+1,750 \cdot 900+150+600+1,050 \cdot 500+1,000+300+900 \cdot 600+2,100 \cdot 300+1,350+150+900$).
- ✓ **Opposite sides agree.** Every room closes both ways round (see the workings). The one apparent misfit — bed 2's 3,610 top vs 3,620 bottom — is two reference faces (100 vs 90 wall tick); the totals agree.
- ⚠ **Wall runs vs floor perimeter — weaker on this set, by construction.** These internal elevations print height chains but no run lengths, so the runs come from the plan chains rather than an independent sheet. The check still closes (ensuite 13,780 = 13,780; bathroom 12,560 = 12,560) but both sides derive from the same chains — it proves consistency, not independence. On the control set the elevations carried their own runs; this practice doesn't do that.
- ✓ **Heights reconcile within each elevation.** All six chains, 0 mm (above).
- ✓ **Fixtures agree between plan and elevation.** The 1800 bath is drawn ~1,800 on the plan and named "CAROMA CUBE 1800MM" on IE 02; both vanity benches are 900 = 300+560+40 on every sheet they appear; both screens are 2,100; the bathroom niche is 600 wide in elevation and ~600 on the plan.
- ⚠ **Sanity ranges — one range fires, with a reason.** Floors 8.4–11.2 m² ✓. But wall:floor is 1.34 (ensuite) and 1.82 (bathroom), below the 2.0–5.5 band the method expects. The reason is structural, not an error: this practice tiles 900-high bands and single feature walls, not floor-to-ceiling rooms — the band assumption behind that ratio range doesn't hold here. Every wall figure traces to a printed height, so we report the ratio as explained rather than suppressing the flag.

4. What we had to fill in

The six fill-ins are on the answer form on page 4. Two more that don't change a number: the towel rails moved under Rev A (clouded on IE 01) — check their final spots on site before drilling tiled walls; and the notes page states written-dims-only but no frame-to-frame convention, so verify one room's set-out on site.

5. The drawings we read

23 sheets, Derbyshire Homes project 14-66, Torquay VIC 3228, dated 15/12/2015:

- A02 Floor plan, 1:100 — **Rev A** (W11 moved, clouded)
- A17 Plan detail + internal elevations, master ensuite & WIR, 1:50 — **Rev A** (W1 width revised; W2, W2A hidden internally — clouded on IE 01/03/04)
- A18 Plan detail + internal elevations, bath & bed 3, 1:50 — Rev —
- A19 Plan detail + internal elevations, bed 2, laundry, pantry & kitchen, 1:50 — Rev —
- A20 Plan detail + internal elevations, kitchen, 1:50 — Rev —
- A00 General notes (written-dims rule, AS 3740 wet areas), site/roof/sections/external elevations read for context; sections carry no wet-room ceiling changes — flat 2,700 throughout the wet rooms, printed on every internal elevation.

6. Before you quote

```
[ ] The sheet numbers and revisions above match the drawings you were given (Rev A!)
[ ] You've answered the questions at the top
[ ] Anything marked ⚠ is sorted, or left out of your quote
[ ] Tiling heights confirmed — bands differ room to room on this set
[ ] You agree with what we tiled under (bath, laundry bench, vanities)
[ ] Tile size and lay direction confirmed — that's what drives the extra for cuts
```

```
[ ] You're happy with 10% extra for cuts, or you've told us to change it  
[ ] Niches, screens, waterproofing, screed and prep are NOT in these numbers  
[ ] Main-area floors (most of this house's tiling) are NOT in these numbers  
[ ] You've re-checked at least two numbers by hand against the plan
```
