

Tile quantities — 5 Ellalong Road, Cremorne

Job **TKF-001** · measured against drawings **Rev L, 01/09/25** · 5 rooms.

ORDER THIS

Floor tiles	36.4 m ²
Wall tiles	58.6 m ²
Feature tiles	12.0 m ²
Tile skirting	7.3 m

+ ~50.8 m² master ensuite walls — pending Q1
+ ~3.1 m² powder room floor — pending Q2

Straight lay, 10% extra for cuts and breakage —
trade standard, not your settings yet. Tell us how
you actually work and we'll re-cut every number.

NOT INCLUDED

Waterproofing membrane and upturns
Screed, falls and floor wastes
Substrate prep, sheeting and levelling
Labour, rates and pricing of any kind
Master ensuite walls — unresolved, see Q1
Powder room floor — unresolved, see Q2
Feature tile edges — unresolved, see page 3

We measure. What you charge is your business.

The order figures above are the measured areas with your settings applied; the measured areas themselves are in THE PROOF and never change with anyone's settings.

Check these 4 things before you quote

[] **1. How high are the master ensuite walls, and is the ceiling sloped?** Every other room says 2700. The master ensuite sheets don't say, anywhere. Two of them also show a sloped line above the bath and over the vanity. Until you tell us we can't give you a wall number for that room — the floor is fine. **Worth about 50 m² of wall tile.**

[] **2. Can you send the powder room floor plan?** Sheets 3.02, 3.03 and 3.04 are here, but 3.01 isn't. We worked the floor backwards off the four wall drawings and got about 1730 × 1610. Confirm that, or send the sheet. **Worth about 3 m² of floor tile.**

[] **3. How tall are the doors and windows?** Not one door or window height is written on any sheet. We used 2040 for the four doors and read the windows off the drawings for reference only. **Worth up to 9 m² of wall tile.**

[] **4. Do you tile under the wall-hung vanities, and behind the baths?** We ran the floor straight under all three wall-hung vanities — they sit 300 off the floor. We did **not** tile the two bath platforms. **Under the vanities is 3.4 m². The bath platforms are 4.3 m².**

Room by room

MAIN BATHROOM ✓

- **Floor tiles — 9.0 m²**
- **Wall tiles — 29.6 m²** · all four walls, includes 2 niches
- **Feature tiles — 6.0 m²** · behind the vanity, laid vertically

Over the bath, tiling starts at the bath rim. The shower nib is tiled 1200 high.

GUEST ENSUITE △

- **Floor tiles — 9.3 m²** · tiles run under the vanity
- **Wall tiles — 27.8 m²** △ · all four walls, includes 2 niches
- **Feature tiles — 6.0 m²** △

The two wall figures add to 33.8 m² and **that total is solid** — it's the split we've guessed.

LAUNDRY ✓

- **Floor tiles — 6.3 m²** · after taking off the cupboards
- **Wall tiles — 1.2 m²** · splashback only

Not a tiled room — a 450 splashback over the bench, nothing else. Quoted floor to ceiling, that's ~30 m² you'd never lay.

MASTER ENSUITE △

- **Floor tiles — 11.8 m²** ✓ · ready to order
- **Wall tiles — about 50.8 m²** △ · **not ready**. We need the ceiling height — Q1

Cross-shaped, not a rectangle. Measured as one rectangle it reads 19.9 m² — 9 m² over.

POWDER ROOM △

- **Floor tiles — about 3.1 m²** △ · **not ready**. No floor plan in the set — Q2
- **Tile skirting — 7.3 m** ✓ · 300 high
- **Wall tiles — none**

The walls aren't tiled — textured finish, 300 skirting. The skirting is still safe to order.

SITE NOTES

Sheet 12.01 is 1:25; every other sheet is 1:20.
We never scale - anyone who does will be 25%
out on the biggest room in the job.

Sheet 4.02 has a hand-drawn red arrow pointing
at the laundry splashback. Not CAD - someone
marked it up. Measured as drawn.

Guest ensuite screen: the two chains on sheet
10.05 disagree by 165 mm (2900 vs 2735). We
used 2900. Check before you set out.

All sheets say "frame to frame", so finished
tile faces sit ~30-40 mm inside the printed
lines. Everything here is marginally generous.

Assumptions — the answer form

Ten things the drawings didn't tell us. We've written what we used and what it's worth, so you can see which ones are worth chasing. Scribble your answers in the last column, photo it, send it back — **and we re-issue free.**

What we assumed	We used	Worth	Your answer
Master ensuite ceiling height, and whether it's sloped	flat 2700	~50.8 m ²	___
Powder room floor size — no floor plan in the set	1730 × 1610	~3.1 m ²	___
Door opening heights — 4 doors, none dimensioned	2040	up to 6.7 m ²	___
Main bathroom window height	1360	1.4 m ²	___
Guest ensuite window height	1590	1.2 m ²	___
Master ensuite gable window heights — 2 of them	780 each	0.9 m ²	___
Where the feature tile stops — 5 sheets call it up, 1 dimensions it	estimated	~15.8 m ²	___
Guest ensuite shower screen position — 2 chains disagree	2900	~0.5 m ²	___
Niche depths — only the nib-wall niche is dimensioned	70	~0.2 m ²	___
Main bathroom west wall step — chain says 2260, drawing looks like 2110	2260	0.03 m ²	___

Two more that aren't assumptions but are scope — tick whichever matches how you work:

	Yes	No
Tile under the wall-hung vanities? <i>(we said yes — 3.4 m²)</i>	☐	☐
Tile behind the bath platforms? <i>(we said no — 4.3 m²)</i>	☐	☐

=====

THE PROOF — for checking, not reading.

=====

Everything past this line is the working. You don't need any of it to use the numbers on page 1. It's here so you can check anything you want to, and so you can hold us to it.

1. The measured areas, and how they became the order

These are the measured areas — what the plans say. They are the same for every tiler who ever gets this set. Nothing in your profile, and nothing about how you lay tile, can move them by a millimetre.

	Floor	Wall	Feature	Skirting
Powder room	2.785	—	—	6.680 m
Laundry	5.684	1.136	—	—
Main bathroom	8.205	26.925	5.454	—
Guest ensuite	8.440	25.272	5.413	—
Master ensuite	10.693	46.180	10.356	—
Ready to order	33.022	53.333	10.867	6.680 m

Italics = not ready to order, waiting on a question.

Then your settings turn those into an order

- | | | |
|----------------------------------|-------------------------------------|---|
| 1. Measured | | the plans' truth |
| 2. + 10% extra for cuts | straight lay | trade standard - not confirmed by you yet |
| 3. + 0% batch buffer | not set | account question 5 |
| 4. + 0% lead-time buffer | not set | account question 5 |
| 5. Rounded to 0.1 m ² | per room, then the | rooms added up |
| 6. Boxes | not worked out - we don't know your | tile yet |

	Measured	Order
Floor tiles	33.022 m ²	36.4 m²
Wall tiles	53.333 m ²	58.6 m²
Feature tiles	10.867 m ²	12.0 m²
Tile skirting	6.680 m	7.3 m

The order column runs a touch above a straight 10% because we round each room to 0.1 first and then add the rooms up — so the room figures on page 2 visibly add to the total.

Lay these floors herringbone instead and the order becomes 38.0 / 61.3 / 12.5 m² at 15%. The measured column doesn't move. That's the whole idea.

Painter quantities — measured but not shown, because your account is set to tiler. Walls 41.466 m², ceilings 42.400 m². Say the word and they go in every job.

2. Room by room working

Powder room — sheets 3.02, 3.03, 3.04

No floor plan in the set, so the floor is worked backwards off the four wall runs.

Wall drawing 02 run 1730 checked: $100 + 840 + 790 = 1730$ on wall drawing 04
 Wall drawing 01 run 1605
 Wall drawing 03 run 1615 10 mm off drawing 01 — fine

Floor $1730 \times 1610 = 2.785 \text{ m}^2$

Walls are a textured finish, not tile. Height chain on wall drawing 02: $300 + 40 + 310 + 250 + 200 + 1350 + 250 = 2700$ — the 300 at the bottom is the tile skirting.

Skirting $1730 + 1610 + 1730 + 1610 = 6.680 \text{ m}$

That's the full way round — take your door width off it once sheet 3.01 turns up.

Laundry — sheets 4.01 to 4.05

Room is a true rectangle. Checked both ways:

across $700 + 1150 + 450 = 2300$ drawing says 2300
 down $715 + 2525 = 3240$ drawing says 3240

Floor, whole room $2300 \times 3240 = 7.452 \text{ m}^2$

Cupboards taken off $700 \times 2525 = -1.768 \text{ m}^2$

Floor to tile 5.684 m^2

The cupboards sit on the floor (135 kickboard), so tiles stop at them.

Splashback $2525 \times 450 = 1.136 \text{ m}^2$

Sheet 4.02 says "450mm TILE SPLASH BACK" over the bench. Sheets 4.03 and 4.04 show no tile at all — cupboards, a bench seat and the door.

Main bathroom — sheets 7.01 to 7.05

The west wall steps out 200 partway down, so we measured the floor in two strips.

North strip 2570 wide (550 vanity + 1000 window + 1020 bath = 2570)

South strip 2770 wide (685 + 820 + 245 + 20 + 1000 = 2770)

Step is 2260 down from the north wall. Whole room is 3895 deep.

Strip A $2570 \times 3895 = 10.010 \text{ m}^2$

Strip B $200 \times 1635 = 0.327 \text{ m}^2$

Floor, whole room 10.337 m^2

Bath platform taken off $1020 \times 2090 = -2.132 \text{ m}^2$

Floor to tile 8.205 m^2

The vanity is wall hung with 300 clear underneath, so tiles run straight under it — nothing taken off for it.

Walls, 2700 high ($300 + 540 + 60 + 250 + 1000 + 550 = 2700$):

West wall $3895 \times 2700 = 10.517 \text{ m}^2$

of that, feature tile behind the vanity $2020 \times 2700 = 5.454$

North wall $2770 \times 2700 = 7.479$, less window $= 6.119 \text{ m}^2$

East wall — three different heights on one wall:

over the bath 2000×2150 (2700 less the 550 bath rim) $= 4.300$

shower nib end 90×1200 (half wall, tiled 1200 high) $= 0.108$

shower $1805 \times 2700 = 4.874$

$= 9.281 \text{ m}^2$

South wall $2770 \times 2700 = 7.479$, less the door $= 5.806 \text{ m}^2$

Niches — nib wall $600 \times 300 \times 70$ deep $= 0.306 \text{ m}^2$

— shower $700 \times 300 \times 70$ deep $= 0.350 \text{ m}^2$

Wall tile, all 32.379 m^2

less the feature tile -5.454 m^2

Plain wall tile 26.925 m^2

Guest ensuite — sheets 10.05 to 10.08

Rectangle, checked four ways:

across, top	$1920 + 960 + 20 + 1100$	= 4000
across, bottom	$1290 + 820 + 1890$	= 4000
down, left	$600 + 1060 + 450$	= 2110
down, right	$1200 + 910$	= 2110

Floor 4000×2110 = 8.440 m²

Vanity is wall hung, 300 clear — tiles run under it.

Walls, 2700 high, tiled floor to ceiling all round:

North wall	$4000 \times 2700 = 10.800$, less window	= 9.639 m ²
Side wall	2110×2700	= 5.697 m ²
South wall	$4000 \times 2700 = 10.800$, less the door	= 9.127 m ²
Side wall	2110×2700	= 5.697 m ²
Niches — shower 700 × 300, over vanity 300 × 300		= 0.524 m ²
Wall tile, all		30.685 m ²
less the feature tile (edge not given — see below)		-5.413 m ²
Plain wall tile		25.272 m ²

Master ensuite — sheets 12.01 to 12.08

Cross-shaped room. We measured it in four strips.

Checked all four ways round:

across, top	$1835 + 495 + 2305 + 585$	= 5220	drawing says 5215
across, bottom	$1835 + 3380$	= 5215	drawing says 5215
down, left	$960 + 550 + 250 + 1270 + 815$	= 3845	drawing says 3840
down, right	$960 + 860 + 2000$	= 3820	drawing says 3820

Bath alcove	2305×1510	= 3.481 m ²
Middle strip	2800×310	= 0.868 m ²
Main floor	3380×2020	= 6.828 m ²
Shower alcove	1835×1204	= 2.209 m ²
Floor, whole room		13.385 m ²
Bath platform taken off	2305×960	= -2.213 m ²
Shower seat taken off	400×1200	= -0.480 m ²
Floor to tile		10.693 m ²

Measured as one big rectangle (5215 × 3820) this room comes out at 19.9 m². It isn't a rectangle. The difference is 9.2 m² of tile you'd order and never lay — at typical porcelain prices, well over a thousand dollars of tile, plus the hours you'd have quoted for floor that doesn't exist.

Walls — not finished. The four wall drawings give us the run lengths and they check out perfectly (see §3). What no sheet gives us is a wall height. Sheets 12.02 to 12.05 print 2100, 2200, 1300+500 and 950+250+600+300 — all of those locate fittings, none of them is a wall height. Sheets 12.03 and 12.04 also show a sloped line above the bath and over the vanity.

Priced at a flat 2700 purely as a placeholder:

Walls all round	18070×2700	= 48.789 m ²
less the door and two windows		= -2.609 m ²
Placeholder only		46.180 m ²

If the ceiling is sloped, the right way to measure each wall is $\text{run} \times (\text{low height} + \text{high height}) \div 2$. As a feel for the size of it: a slope running 2400 up to 3000 across the gable wall moves that wall by about 1.5 m², and a flat 2400 throughout would drop the whole room by about 5 m².

3. What we double-checked

Six checks on every job. Here's how this set did.

✓ **Every dimension chain adds up to the total printed next to it.** We added 27 chains across the five rooms. All of them landed within 5 mm of the stated total except two, both noted below. Highlights:

Powder room, wall drawing 04	100 + 840 + 790	= 1730	✓
Main bathroom, north wall	550 + 1000 + 1020	= 2570	✓
Main bathroom, south wall	685 + 820 + 245 + 20 + 1000	= 2770	✓
Main bathroom, east wall	2000 + 90 + 1805	= 3895	✓
Laundry	700 + 1150 + 450	= 2300	✓
Guest ensuite, four ways round	all four come to 4000 / 2110	✓	
Master ensuite, bottom	1835 + 3380	= 5215	✓
Master ensuite, wall drawing 04	1980 + 500 + 900 + 1835	= 5215	✓

✓ **Opposite walls of the same room are the same length.** Checked in all five rooms. The powder room's two side walls are 1605 and 1615 — 10 mm apart, which is nothing. Everything else is dead on.

✓ **Double-checked against the plan totals — the strongest check we do.** We add up the wall drawings, then separately add up the walls on the floor plan. Two different sheets, drawn at different times. They have to agree.

Laundry	wall drawings	3240 + 2300 + 3240 + 2300	= 11,080	✓ dead on
	floor plan	2 × (3240 + 2300)	= 11,080	
Main bathroom	wall drawings	3895 + 2770 + 3895 + 2770	= 13,330	✓ dead on
	floor plan	2570+2260+200+1635+2770+3895	= 13,330	
Guest ensuite	wall drawings	4000 + 2110 + 4000 + 2110	= 12,220	✓ dead on
	floor plan	2 × (4000 + 2110)	= 12,220	
Master ensuite	wall drawings	3820 + 5215 + 3820 + 5215	= 18,070	✓ 11 mm
	floor plan	all 12 sides added up	= 18,081	

That last one is worth a moment. The master ensuite floor plan is a 12-sided cross. We measured it side by side, then compared it to the four wall drawings, and the two came within 11 mm of each other. That's why we're confident in 11.8 m² of floor for that room even while the walls are still open.

✓ **Wall heights add up inside each wall drawing.** Powder room, laundry, main bathroom and guest ensuite all come to 2700 exactly.

⚠ **Master ensuite — no height chain reaches a wall height on any of the four sheets.** That's question 1.

✓ **The bath is the same bath on the floor plan and the wall drawing.** Checked seven fittings across the five rooms. Two are 20 mm out (the guest and master vanities) — not enough to change a tile order.

✓ **Nothing looks silly.** Every floor between 2 and 25 m². Wall-to-floor ratios where you'd expect them, except the laundry, which is low because it's a splashback — and that's checked against sheet 4.02.

4. What we had to fill in

The ten fill-ins are on the answer form on page 3, with what we used and what each one is worth. Two extras that didn't make the form because they don't change a number:

- **Sheet 4.02 carries a hand-drawn red arrow** pointing at the laundry splashback. Not CAD — someone has marked the drawing up. If that means the splashback is changing, tell us.
- **The powder room walls** are called up as a textured finish with a 300 tile skirting, so there's no wall tile in there at all. Still right, or has it changed since Rev L?

5. The drawings we read

25 sheets, all 1:20 at A3 **except sheet 12.01, which is 1:25.**

Sheet	Room	What it is
3.02, 3.03	Powder room	Wall drawings 01–04
3.04	Powder room	3D
4.01	Laundry	Floor plan
4.02, 4.03, 4.04	Laundry	Wall drawings + cupboard internals
4.05	Laundry	3D
7.01	Main bathroom	Floor plan
7.02, 7.03	Main bathroom	Wall drawings 01–04
7.04, 7.05	Main bathroom	3D
10.05	Guest ensuite	Floor plan
10.06, 10.07	Guest ensuite	Wall drawings 01–04
10.08	Guest ensuite	3D
12.01	Master ensuite	Floor plan — 1:25, not 1:20
12.02–12.05	Master ensuite	Wall drawings 01–04
12.06–12.08	Master ensuite	3D

Missing: **sheet 3.01, the powder room floor plan.**

One warning worth passing on: sheet 12.01 is drawn at 1:25 while everything else is 1:20. We don't scale off drawings — we only use the printed numbers — but if anyone else on the job scales that sheet out of habit, they'll be 25% wrong on the biggest room in the set.

6. Before you quote

```
[ ] The sheet numbers and dates above match the drawings you were given (Rev L, 01/09/25)
[ ] You've answered the 4 questions on page 1
[ ] Anything marked Δ is sorted, or left out of your quote
[ ] Tiling heights confirmed – laundry is a 450 splashback, powder room a 300 skirting,
    main bathroom 2150 over the bath and a 1200 nib
[ ] Door and window sizes confirmed – 4 doors and 3 windows have no height on any sheet
[ ] You agree with what we took off and what we left in (under the vanity? behind the bath?)
[ ] Niche depths confirmed – only one of them is written on the drawings
[ ] Feature tile edges marked up on the wall drawings
[ ] Tile size and lay direction confirmed – that's what drives the extra for cuts
[ ] You're happy with 10% extra for cuts, or you've told us to change it
[ ] Waterproofing, screed, falls and floor prep are NOT in these numbers
[ ] You've re-checked at least two numbers by hand against the plan
```

SET UP YOUR ACCOUNT

Answer once, applies to every job you ever send. None of this can change a measured area — it only changes how we turn measured area into an order. Right now we're running trade standards, and this document says so wherever it matters.

1. What do you normally lay, and what do you allow for cuts?

Straight ☐ _____% Diagonal ☐ _____%
Brick bond ☐ _____% Herringbone ☐ _____%

We've used straight at 10%. Most run 15% for diagonal or herringbone.

2. Tile skirting — in the main order list, or off to the side?

In the list ☐ Separate ☐ (we've put it in)

3. Want box counts as well as m²?

Yes ☐ No ☐ Tell us the m² per box each job and we'll give you whole boxes, rounded up.

4. Decimals or whole metres?

36.4 m² ☐ 37 m² ☐ Whole metres always round UP, never down.

5. Any supplier quirks we should always allow for?

Batch / dye-lot buffer _____% (currently 0)
Long reorder lead times _____% (currently 0)

Shown as their own line, so you can see them and drop them any time.

6. Anything you always want flagged?

Waterproofing zones ☒ Trims in lineal metres ☒ (our defaults)
Falls & floor wastes ☐ Movement joints ☐ Substrate notes ☐

Other: _____

Measured from the printed dimensions only — we never scale off a drawing. Every number can be re-checked from the working. If one is wrong, mark it up and send it back.
