

TAKEOFF — 5 Ellalong Road, Cremorne

Tile quantities · 5 rooms · drawings dated 01/09/25 (Rev L) · measured 16 Aug 2026

=====	
ORDER THIS	
=====	
Floor tiles	36.4 m ²
Wall tiles	58.6 m ²
Feature tiles	12.0 m ²
Tile skirting	7.3 m
=====	
Straight lay, 10% extra for cuts and breakage – trade standard, not your settings yet. Tell us how you actually work and we'll re-cut every number.	

Want box counts? Send us the tile and the m² per box and we'll add a *boxes to buy* line, rounded up to whole boxes — that's the number you read out at the counter, not 36.4 m².

Two sets of numbers in this document

- **Measured areas** are what the plans say. They're the same for every tiler alive, and nothing about how you work can change them. They're at the bottom, at full precision.
- **Order quantities** are those measured areas with your settings applied — lay pattern, extra for cuts, rounding. Those are the numbers above.

So if you tell us you lay herringbone, or that you always buy 5% over for batch variation, we re-cut the order in about a minute and **the measured areas don't move at all**. You can disagree with our 10% and still trust our 33.022 m².

Not in that total — 2 things we can't finish yet

- **Master ensuite walls** — about **50.8 m²** more. We need the ceiling height before we can give you a real number. See question 1.
 - **Powder room floor** — about **3.1 m²**. The floor plan sheet isn't in the set, so we worked it backwards off the wall drawings. See question 2.
-

⚠ CHECK THESE 4 THINGS BEFORE YOU QUOTE

[] **1. How high are the master ensuite walls, and is the ceiling sloped?** Every other room says 2700. The master ensuite sheets don't say, anywhere. Two of them also show a sloped line above the bath and over the vanity, which looks like a sloped ceiling. Until you tell us, we can't give you a wall number for that room — the floor is fine. **Worth about 50 m² of wall tile.**

[] **2. Can you send the powder room floor plan?** Sheets 3.02, 3.03 and 3.04 are here, but 3.01 isn't. We worked the floor backwards off the four wall drawings and got about 1730 × 1610. Confirm that, or send the sheet. **Worth about 3 m² of floor tile.**

[] **3. How tall are the doors and windows?** Not one door or window height is written on any sheet. We used 2040 for the four doors (standard) and read the windows off the drawings for reference only. **Worth up to 9 m² of wall tile across the job.**

[] **4. Do you tile under the wall-hung vanities, and behind the baths?** We ran the floor straight under all three wall-hung vanities — they sit 300 off the floor. We did **not** tile the two bath platforms. If your scope is

different, tell us. **Under the vanities is 3.4 m². The bath platforms are 4.3 m².**

There are 10 smaller things we had to fill in — window sizes, niche depths, feature tile edges. They're all listed at the bottom under "What we had to fill in".

Room by room

Quantities below are **what to order** — the 10% extra for cuts is already in them.

MAIN BATHROOM ✓

- **Floor tiles — 9.0 m²**
- **Wall tiles — 29.6 m²** · all four walls, includes 2 niches
- **Feature tiles — 6.0 m²** · behind the vanity, laid vertically

Two things to know: the wall over the bath is only tiled from the bath rim up, not from the floor. And the shower nib is a half wall — tiled 1200 high, not to the ceiling.

GUEST ENSUITE ⚠

- **Floor tiles — 9.3 m²** · tiles run under the vanity
- **Wall tiles — 27.8 m²** ⚠ · all four walls, includes 2 niches
- **Feature tiles — 6.0 m²** ⚠

The two wall numbers add up to 33.8 m² and **that total is solid**. It's where the line between them sits that we've had to guess, because no sheet says where the feature tile stops. If you're buying both tiles off the same supplier on the same day, you're fine. If you're ordering the feature tile separately, get the edges marked up first.

LAUNDRY ✓

- **Floor tiles — 6.3 m²** · after taking off the cupboards
- **Wall tiles — 1.2 m²** · splashback only

The laundry is not a tiled room. It's a 450 high splashback over the bench and nothing else — the other three walls are cupboards, a door and paint. If you were expecting to tile it floor to ceiling, that's about 30 m² you'd have quoted and never laid.

MASTER ENSUITE ⚠

- **Floor tiles — 11.8 m²** ✓ · ready to order
- **Wall tiles — about 50.8 m²** ⚠ · **not ready.** We need the ceiling height — question 1

The floor is solid. We checked it two different ways and they agree. It's a cross-shaped room, not a rectangle: measured as one big rectangle it comes out at 19.9 m², which would over-order by about 9 m².

POWDER ROOM ⚠

- **Floor tiles — about 3.1 m²** ⚠ · **not ready.** No floor plan in the set — question 2
- **Tile skirting — 7.3 m** ✓ · 300 high
- **Wall tiles — none**

The powder room walls aren't tiled. The drawings call for a textured finish with a 300 high tile skirting at the bottom. So your job in there is 7.3 m of skirting and the floor — the walls belong to the painter.

The skirting is safe to order even though the floor isn't. The four wall lengths are printed on the wall drawings, so adding them up for the skirting is straightforward. The floor needs us to assume those four walls make a

rectangle, and that's the bit we can't check without sheet 3.01.

Things we flag by default

You haven't set your account up yet, so we're flagging the two things most tilers want flagged. Question 6 at the bottom changes this list to whatever you actually want.

Mitred corners — about 12.1 m of them

The notes on every sheet say *"All wall tiles & niches to be mitred at corner junctions to achieve a clean, continuous finish. No trims to be used unless noted otherwise."* That's a labour item, not a material one, and it's easy to leave out of a quote.

- **Main bathroom — 8.9 m.** The step in the west wall (2.7 m full height), the shower nib (2 corners at 1200 = 2.4 m), and both niches (1.8 m + 2.0 m).
- **Guest ensuite — 3.2 m.** Both niches (2.0 m + 1.2 m).
- **Master ensuite — not counted.** Its walls aren't finished, so neither is this.

One actual trim in the whole set: the laundry splashback gets a **nickel or stainless strip trim to the top edge, 2.5 m** (sheet 4.02).

Waterproofing zones

Not priced — that's the waterproofer's scope, and the membrane extent and upturn heights aren't on these drawings. But here's where the wet zones are, so you can check somebody's covering them:

- **Master ensuite** — enclosed shower alcove, floor **2.2 m²**, plus the 400 × 1200 shower seat, plus the bath platform.
 - **Guest ensuite** — walk-in shower, floor about **1.3 m²** (depends on question 8 below).
 - **Main bathroom** — shower zone in the south-east corner behind the nib and screen, plus the bath platform. The plan doesn't bound the shower zone separately, so we haven't put a number on it.
 - **Laundry** — floor waste shown; no shower.
-

If you're also quoting the painting

- **Walls to paint — 45.6 m²** · powder room 15.8, laundry 29.8
- **Ceilings — 46.7 m²** · all five rooms

The main bathroom, guest ensuite and master ensuite have no painted wall — they're tiled floor to ceiling. The powder room wall finish is textured, not standard paint, so price it separately. Add the slope allowance to the master ensuite ceiling once question 1 is answered.

HOW WE GOT THESE NUMBERS

Everything below is the working. You don't need to read it to use the numbers above — it's here so you can check anything you want to.

1. The measured areas, and how they became the order

These are the measured areas — what the plans say. They are the same for every tiler who ever gets this

set. Nothing in your profile, and nothing about how you lay tile, can move them by a millimetre.

	Floor	Wall	Feature	Skirting
Powder room	2.785	—	—	6.680 m
Laundry	5.684	1.136	—	—
Main bathroom	8.205	26.925	5.454	—
Guest ensuite	8.440	25.272	5.413	—
Master ensuite	10.693	46.180	10.356	—
Ready to order	33.022	53.333	10.867	6.680 m

Italics = not ready to order, waiting on a question.

Then your settings turn those into an order

Applied in steps, so you can see and change any one of them:

- | | | |
|----------------------------------|--|---|
| 1. Measured | | the plans' truth |
| 2. + 10% extra for cuts | straight lay | trade standard – not confirmed by you yet |
| 3. + 0% batch buffer | not set | question 5 at the bottom |
| 4. + 0% lead-time buffer | not set | question 5 at the bottom |
| 5. Rounded to 0.1 m ² | per room, then the rooms added up | |
| 6. Boxes | not worked out – we don't know your tile yet | |

	Measured	Order
Floor tiles	33.022 m ²	36.4 m²
Wall tiles	53.333 m ²	58.6 m²
Feature tiles	10.867 m ²	12.0 m²
Tile skirting	6.680 m	7.3 m

If you lay these floors herringbone instead, the order becomes 38.0 / 61.3 / 12.5 m² at 15%, and the measured column doesn't change. That's the whole idea.

The bottom row is a touch higher than 10% on the row above it. That's deliberate: we round each room to 0.1 first and then add the rooms up, so the room figures you're quoting from visibly add to the total. Rounding the other way round would leave you with a total that doesn't match the lines above it.

Painting, straight: walls 41.466 m², ceilings 42.400 m².

If you want a different percentage: 15% instead of 10% gives floor 38.0 m², wall 61.3 m², feature 12.5 m². We'd suggest 15% on the master ensuite if the sloped ceiling is confirmed — slopes make a lot of cuts.

2. Room by room working

Powder room — sheets 3.02, 3.03, 3.04

No floor plan in the set, so the floor is worked backwards off the four wall runs.

Wall drawing 02 run	1730	checked: 100 + 840 + 790 = 1730	on wall drawing 04
Wall drawing 01 run	1605		
Wall drawing 03 run	1615	10 mm off drawing 01 – fine	

$$\text{Floor} \quad 1730 \times 1610 = 2.785 \text{ m}^2$$

Walls are a textured finish, not tile. Height chain on wall drawing 02: $300 + 40 + 310 + 250 + 200 + 1350 + 250 = 2700$ — the 300 at the bottom is the tile skirting.

$$\text{Skirting} \quad 1730 + 1610 + 1730 + 1610 = 6.680 \text{ m}$$

That's the full way round — take your door width off it once sheet 3.01 turns up.

Laundry — sheets 4.01 to 4.05

Room is a true rectangle. Checked both ways:

across	$700 + 1150 + 450$	$= 2300$	drawing says 2300
down	$715 + 2525$	$= 3240$	drawing says 3240

Floor, whole room	2300×3240	$= 7.452 \text{ m}^2$
Cupboards taken off	700×2525	$= -1.768 \text{ m}^2$
Floor to tile		5.684 m^2

The cupboards sit on the floor (135 kickboard), so tiles stop at them.

$$\text{Splashback} \quad 2525 \times 450 = 1.136 \text{ m}^2$$

Sheet 4.02 says "450mm TILE SPLASH BACK" over the bench. Sheets 4.03 and 4.04 show no tile at all — cupboards, a bench seat and the door.

Main bathroom — sheets 7.01 to 7.05

The west wall steps out 200 partway down, so we measured the floor in two strips.

North strip	2570 wide	$(550 \text{ vanity} + 1000 \text{ window} + 1020 \text{ bath} = 2570)$
South strip	2770 wide	$(685 + 820 + 245 + 20 + 1000 = 2770)$
Step is 2260 down from the north wall. Whole room is 3895 deep.		

Strip A	2570×3895	$= 10.010 \text{ m}^2$
Strip B	200×1635	$= 0.327 \text{ m}^2$
Floor, whole room		10.337 m^2
Bath platform taken off	1020×2090	$= -2.132 \text{ m}^2$
Floor to tile		8.205 m^2

The vanity is wall hung with 300 clear underneath, so tiles run straight under it — nothing taken off for it.

Walls, 2700 high ($300 + 540 + 60 + 250 + 1000 + 550 = 2700$):

West wall	3895×2700	$= 10.517 \text{ m}^2$
of that, feature tile behind the vanity	2020×2700	$= 5.454$
North wall	$2770 \times 2700 = 7.479$, less window	$= 6.119 \text{ m}^2$
East wall — three different heights on one wall:		
over the bath	2000×2150 (2700 less the 550 bath rim)	$= 4.300$
shower nib end	90×1200 (half wall, tiled 1200 high)	$= 0.108$
shower	1805×2700	$= 4.874$
		$= 9.281 \text{ m}^2$
South wall	$2770 \times 2700 = 7.479$, less the door	$= 5.806 \text{ m}^2$
Niches — nib wall	$600 \times 300 \times 70$ deep	$= 0.306 \text{ m}^2$
— shower	$700 \times 300 \times 70$ deep	$= 0.350 \text{ m}^2$
Wall tile, all		32.379 m^2
less the feature tile		-5.454 m^2
Plain wall tile		26.925 m^2

Guest ensuite — sheets 10.05 to 10.08

Rectangle, checked four ways:

across, top	1920 + 960 + 20 + 1100	= 4000
across, bottom	1290 + 820 + 1890	= 4000
down, left	600 + 1060 + 450	= 2110
down, right	1200 + 910	= 2110

Floor	4000 × 2110	= 8.440 m ²
-------	-------------	------------------------

Vanity is wall hung, 300 clear — tiles run under it.

Walls, 2700 high, tiled floor to ceiling all round:

North wall	4000 × 2700 = 10.800, less window	= 9.639 m ²
Side wall	2110 × 2700	= 5.697 m ²
South wall	4000 × 2700 = 10.800, less the door	= 9.127 m ²
Side wall	2110 × 2700	= 5.697 m ²
Niches — shower	700 × 300, over vanity 300 × 300	= 0.524 m ²
Wall tile, all		30.685 m ²
	less the feature tile (edge not given — see below)	-5.413 m ²
Plain wall tile		25.272 m ²

Master ensuite — sheets 12.01 to 12.08

Cross-shaped room. We measured it in four strips.

Checked all four ways round:

across, top	1835 + 495 + 2305 + 585	= 5220	drawing says 5215
across, bottom	1835 + 3380	= 5215	drawing says 5215
down, left	960 + 550 + 250 + 1270 + 815	= 3845	drawing says 3840
down, right	960 + 860 + 2000	= 3820	drawing says 3820

Bath alcove	2305 × 1510	= 3.481 m ²
Middle strip	2800 × 310	= 0.868 m ²
Main floor	3380 × 2020	= 6.828 m ²
Shower alcove	1835 × 1204	= 2.209 m ²
Floor, whole room		13.385 m ²
Bath platform taken off	2305 × 960	= -2.213 m ²
Shower seat taken off	400 × 1200	= -0.480 m ²
Floor to tile		10.693 m ²

Measured as one big rectangle (5215 × 3820) this room comes out at 19.9 m². It isn't a rectangle. The difference is 9.2 m² of tile you'd order and never lay — roughly \$1,400 of porcelain, plus the hours you'd have quoted for floor that doesn't exist.

Walls — not finished. The four wall drawings give us the run lengths and they check out perfectly (see §3). What no sheet gives us is a wall height. Sheets 12.02 to 12.05 print 2100, 2200, 1300+500 and 950+250+600+300 — all of those locate fittings, none of them is a wall height. Sheets 12.03 and 12.04 also show a sloped line above the bath and over the vanity.

Priced at a flat 2700 purely as a placeholder:

Walls all round	18070 × 2700	= 48.789 m ²
less the door and two windows		= -2.609 m ²
Placeholder only		46.180 m ²

If the ceiling is sloped, the right way to measure each wall is $\text{run} \times (\text{low height} + \text{high height}) \div 2$. As a feel for the size of it: a slope running 2400 up to 3000 across the gable wall moves that wall by about 1.5 m², and a flat 2400 throughout would drop the whole room by about 5 m².

3. What we double-checked

Six checks on every job. Here's how this set did.

✓ **Every dimension chain adds up to the total printed next to it.** We added 27 chains across the five rooms. All of them landed within 5 mm of the stated total except two, both noted below. Highlights:

Powder room, wall drawing 04	100 + 840 + 790	= 1730	✓
Main bathroom, north wall	550 + 1000 + 1020	= 2570	✓
Main bathroom, south wall	685 + 820 + 245 + 20 + 1000	= 2770	✓
Main bathroom, east wall	2000 + 90 + 1805	= 3895	✓
Laundry	700 + 1150 + 450	= 2300	✓
Guest ensuite, four ways round	all four come to 4000 / 2110	✓	
Master ensuite, bottom	1835 + 3380	= 5215	✓
Master ensuite, wall drawing 04	1980 + 500 + 900 + 1835	= 5215	✓

✓ **Opposite walls of the same room are the same length.** Checked in all five rooms. The powder room's two side walls are 1605 and 1615 — 10 mm apart, which is nothing. Everything else is dead on.

✓ **Double-checked against the plan totals — the strongest check we do.** We add up the wall drawings, then separately add up the walls on the floor plan. Two different sheets, drawn at different times. They have to agree.

Laundry	wall drawings	3240 + 2300 + 3240 + 2300	= 11,080	
	floor plan	2 × (3240 + 2300)	= 11,080	✓ dead on
Main bathroom	wall drawings	3895 + 2770 + 3895 + 2770	= 13,330	
	floor plan	2570+2260+200+1635+2770+3895	= 13,330	✓ dead on
Guest ensuite	wall drawings	4000 + 2110 + 4000 + 2110	= 12,220	
	floor plan	2 × (4000 + 2110)	= 12,220	✓ dead on
Master ensuite	wall drawings	3820 + 5215 + 3820 + 5215	= 18,070	
	floor plan	all 12 sides added up	= 18,081	✓ 11 mm

That last one is worth a moment. The master ensuite floor plan is a 12-sided cross. We measured it side by side, then compared it to the four wall drawings, and the two came within 11 mm of each other. That's why we're confident in 11.8 m² of floor for that room even while the walls are still open.

✓ **Wall heights add up inside each wall drawing.** Powder room, laundry, main bathroom and guest ensuite all come to 2700 exactly.

⚠ **Master ensuite — no height chain reaches a wall height on any of the four sheets.** That's question 1.

✓ **The bath is the same bath on the floor plan and the wall drawing.** Checked seven fittings across the five rooms. Two are 20 mm out (the guest and master vanities) — not enough to change a tile order.

✓ **Nothing looks silly.** Every floor between 2 and 25 m². Wall-to-floor ratios where you'd expect them, except the laundry, which is low because it's a splashback — and that's checked against sheet 4.02.

4. What we had to fill in

Every one of these is a question. Answer them and we'll re-issue for free.

Bigger ones — these are questions 1 to 4 at the top:

1. Master ensuite ceiling height and whether it's sloped. We used a flat 2700.
2. Powder room floor, worked backwards off the wall drawings. We used 1730 × 1610.
3. Door and window heights. We used 2040 for the four doors.
4. Whether you tile under the wall-hung vanities and behind the baths.

Smaller ones:

1. **Main bathroom window height.** 1000 wide on the plan, no height anywhere. We used 1360 and took 1.4 m² off that wall. What's the real height?
 2. **Guest ensuite window height.** 730 wide, no height. We used 1590 and took 1.2 m² off. Real height?
 3. **Master ensuite gable windows.** Two of them, 600 wide each, no heights. We used 780 each.
 4. **Guest ensuite — where does the shower screen actually sit?** Sheet 10.05 gives two chains along the same wall and they don't agree: 1920 + 960 + 20 puts it at 2900, 2005 + 730 puts it at 2735. 165 mm apart. We went with 2900. It moves about 0.5 m² between plain and feature tile, and it moves your shower setout.
 5. **Main bathroom — where's the step in the west wall?** The printed chain says 2260 down from the north wall. The drawing looks more like 2110. We used the printed 2260. Changes the floor by about 0.03 m², so it barely matters for tile — but worth knowing on site.
 6. **Niche depths.** Only one is given: the nib wall niche on sheet 7.03 is 70 deep. We used 70 for the rest. Are the shower niches deeper — 100? 150? We didn't measure the two master ensuite niches at all because they're not dimensioned.
 7. **Where does the feature tile stop?** Five sheets say "FEATURE TILE LAID VERTICALLY" but only the main bathroom has a dimension we can tie it to (the 2020 vanity run). For the guest and master ensuites there's no edge given, so we've estimated. Mark the edges on the wall drawings and we'll redo it — it's a different tile at a different price.
 8. **There's a hand-drawn red mark on sheet 4.02** (laundry wall drawing 01) — a freehand arrow pointing at the splashback. It's not part of the CAD drawing, someone's drawn on it. Does that mean the splashback is changing? We measured it as drawn.
 9. **Powder room walls** — the drawings say textured finish with a 300 tile skirting, so we've given you no wall tile in there. Still right, or has it changed since Rev L?
 10. **"All dimensions are frame to frame"** — that's on every sheet's notes. It means the dimensions run to the timber, so the finished tiled face sits about 30–40 mm inside each line. Everything we've given you is therefore very slightly generous, which is the safe direction.
-

5. The drawings we read

25 sheets, all 1:20 at A3 **except sheet 12.01, which is 1:25.**

Sheet	Room	What it is
3.02, 3.03	Powder room	Wall drawings 01–04
3.04	Powder room	3D
4.01	Laundry	Floor plan
4.02, 4.03, 4.04	Laundry	Wall drawings + cupboard internals
4.05	Laundry	3D
7.01	Main bathroom	Floor plan
7.02, 7.03	Main bathroom	Wall drawings 01–04
7.04, 7.05	Main bathroom	3D

10.05	Guest ensuite	Floor plan
10.06, 10.07	Guest ensuite	Wall drawings 01–04
10.08	Guest ensuite	3D
12.01	Master ensuite	Floor plan — 1:25, not 1:20
12.02–12.05	Master ensuite	Wall drawings 01–04
12.06–12.08	Master ensuite	3D

Missing: **sheet 3.01, the powder room floor plan.**

One warning worth passing on: sheet 12.01 is drawn at 1:25 while everything else is 1:20. We don't scale off drawings — we only use the printed numbers — but if anyone else on the job scales that sheet out of habit, they'll be 25% wrong on the biggest room in the set.

6. Six quick questions — so we only ask once

These aren't about your plans. They're about **you**, and once you answer them we apply them to every job you send us without asking again. Right now we're running trade standards, and this document says so wherever it matters.

None of these can change a measured area. They only change how we turn measured area into an order.

1. What do you normally lay, and what do you allow for cuts? Straight, brick bond, diagonal, herringbone? We've run **straight at 10%**. Most run 15% for diagonal or herringbone. If your numbers are different, yours win.

2. Do you want tile skirting in the main order list, or off to the side? We've put it in.

3. Want box counts as well as m²? Tell us the m² per box on each job and we'll give you whole boxes, rounded up.

4. Decimals or whole metres? We've used 36.4 m². Some prefer 37 m². We always round whole metres **up**, never down.

5. Any supplier quirks we should always allow for? Ever been caught by a batch or dye-lot change mid-job? Anything you use where a reorder takes six weeks? We can add a standing buffer on top of the cut allowance — shown as its own line, so you can see it and drop it whenever you want. Right now it's zero.

6. Anything you always want flagged? We've defaulted to waterproofing zones and trims in lineal metres. Falls and floor wastes, movement joints, substrate notes — say the word and they're on every job.

Answer in one line each and we'll re-issue this takeoff with your settings on it, free.

7. Before you quote

```
[ ] The sheet numbers and dates above match the drawings you were given (Rev L, 01/09/25)
[ ] You've answered the 4 questions at the top
[ ] Anything marked Δ is sorted, or left out of your quote
[ ] Tiling heights confirmed — laundry is a 450 splashback, powder room is a 300 skirting,
    main bathroom is 2150 over the bath and a 1200 nib
[ ] Door and window sizes confirmed — 4 doors and 3 windows have no height on any sheet
[ ] You agree with what we took off and what we left in (under the vanity? behind the bath?)
[ ] Niche depths confirmed — only one of them is written on the drawings
[ ] Feature tile edges marked up on the wall drawings
[ ] Tile size and lay direction confirmed — that's what drives the extra for cuts
[ ] You're happy with 10% extra for cuts, or you've told us to change it
```

- [] Waterproofing, screed, falls and floor prep are NOT in these numbers
- [] You've re-checked at least two numbers by hand against the plan

Measured from the printed dimensions only — we never scale off a drawing. Every number above can be re-checked from the working. If one of them is wrong, mark it up and send it back. That's how this gets better.
